

#### ABSTRACT OF THE DISCLOSURE

A decorative assembly for a floral grouping comprising a floral holding material and a sheet of material. The floral holding material is a shape-sustaining support member having an open upper end, an open lower end and a peripheral sidewall defining an internal chamber extending between the open upper end and the close lower end. A plurality of apertures are provided in the peripheral sidewall of the floral holding material, each aperture adapted to receive a stem portion of a floral grouping. The sheet of material is extended about a portion of the floral holding material to form a decorative cover and the decorative cover cooperates with the shape-sustaining support member to define a reservoir for confining a liquid and a securing element secures the decorative cover about the shape-sustaining support member to hold the decorative cover about the floral holding material.
